we care for the most
important people

COPRECI

setting standards in safety

World's leading manufacturer of safety gas components.
More than **one billion components** in the market.

For more than half a century COPRECI has been developing **domestic appliance components**, which improve appliance performance to provide end users with greater comfort and safety.

When we develop components we're thinking about domestic appliances that are **safer, easier and simpler to use**, with new functions which translate into a sense of well-being.

There are **more than 1,000,000,000 gas components** manufactured by Copreci in the market and in the last 5 years we have **tripled** our production capacity for safety valves, becoming the world's leading manufacturer of safety gas components.

Why are Copreci's valves safer than others?

- 1._ Because Copreci offers **double safety** feature valves.
- 2._ We have led safety in the gas cooking market for years.
- 3._ We are the largest manufacturer of safety components in the world.

SU-K													

More than a decade ago, nobody could imagine that gas appliances would have smart safety systems with re-ignition devices or that they could even be programmed, and even less that they could interact with other appliances in the kitchen.

Today, thanks to developments like **T-key**, **EGME**, **and Su-K**, architects, designers and manufacturers all over the world can maximize their creative potential by integrating gas cooktops with the greatest range of features and functions on the market.

adding new functions to domestic appliances, so
that they can talk and communicate with you.

COPRECI

more safety functions

Instantaneity: This function means that the flame ignites almost immediately, without the user having to hold down the control until it does so.

Child safety: This function allows the control panel to be locked in order to avoid accidental ignition. This stops children from operating it.

Automatic re-ignition: If the flame is blown out for any reason, the system automatically re-lights the appliance thanks to an integrated self-ignition module.

Six hour lock : Once 6 hours have elapsed since the device was last used, the system is fully switched-off for safety reasons.

Led Indicators: These lights provide constant information about the status of the gas hob: whether the burner is on, if the locking system has been activated or if the residual heat in the cooking area means the burner is too hot to touch.

Emergency stop: This sensor turns off all the burners at the same time, in case of an emergency.

Timer function: A specific cooking time can be set, and once it has elapsed the flame is extinguished and an acoustic signal indicates the programme has been completed.

Accurate electronic flow: This enables the user to accurately adjust the gas flow in the appliance and so have full control over the cooking process.

Simmering: This system electronically cycles the flame on and off continuously for precise simmer control (ideal for melting chocolate).

right there inside,
where no-one can see

COPRECI

the heart of your appliance

230,400 **bypass production per day**
12,960 **product references**
223 **Copreci patents**

"Copreci's right there inside, where no-one can see, but you can feel it.... making sure that everything works in perfect harmony..."

We have the world's largest range of components and systems for the assembly of all kinds of gas cooking equipment, free-standing cookers, built-in hobs and ovens.

Our engineering team is always thinking of new ways to make safety components safer, taking into account the **specific cooking habits of each country**, and to meet your specific needs.

Because we are there, in the soul of the domestic appliance, providing intangible added value, which goes straight to the user's heart.

The image is a composite graphic. On the left, a large, stylized, grey 'G' logo is superimposed over a faint, light-colored map of North America. To the right, a detailed map of the United States and Mexico is shown, with state and national borders clearly marked. In the bottom left corner, there is a photograph of three people: a woman with short dark hair in a light blue blazer, a woman with blonde hair in a yellow top, and a man with dark hair in a dark suit. The text 'international projection' is written in a black, handwritten-style font across the middle of the image, partially overlapping the 'G' logo and the map.

international projection

COPRECI

we are not alone

Expansion at Copreci is heading in the direction marked by the customer. This has led to the international projection of our operations, and is why we have different production centres in countries such as **Mexico, Brazil, China, Turkey, Czech Republic and Italy**. We take all our service potential to wherever our customers may be.

Copreci is part of **Mondragon Group**, the foremost business group in the Basque Country and seventh in the ranking of Spain's largest businesses.

Within MONDRAGON, Copreci falls under the **Mondragón Components** Division, with the fundamental aim of developing an internationally competitive business group in the domestic appliance components sector.
